10:30 – 10:45: Ahmad T. Nauman – ***Presentation of the Workshop-Tasks and Aims***

Tutors: Alissa Cornelis, Eva Pesceovich

Content:

"Gender Medicine" is a new and challenging field of research in medicine that aims to improve the health of both women and men around the world.

We offer systematically classified and scientifically recognized teaching material in eight internal medicine disciplines on gender medicine! The eLearning course "eGender Medicine" is an advanced training course with the aim to educate students to be able to use the sex and gender perspective in their later medical life as a doctor or scientist. The awareness of gender differences is nowadays accepted as a quality parameter in medicine.

The term "gender" integrates behavioural, life style, environmental and stress factors as well as genetic variables and is not easily replaced by other parameters.

We offer an effective, flexible and modern learning format following a "blended learning concept". This includes eLearning tools like learning texts, as well in eBook format, audiovisual materials with 30 videos, numerous PowerPoint graphics and quizzes for self-examination to arouse your curiosity. Another important part in this hands-on workshop is to facilitate conversation between students and give the opportunity for online-collaboration. We will ask you to solve a short task in small groups by using the discussion forum and WIKI tool.

At the end of the workshop you will receive a certificate of attendance.

You are invited to finalize the modules to learn more about gender medicine and achieve a certification for 48 "online working hours" for the next 12 weeks.

12:00 - 12:30h Discussion

Certification: Certificate of attendance

Offer: Free of charge access to the eLearning course "Gender Medicine" for 12 weeks with certification of "workload hours"
